

Git 설치

https://brew.sh/index_ko에 접속!

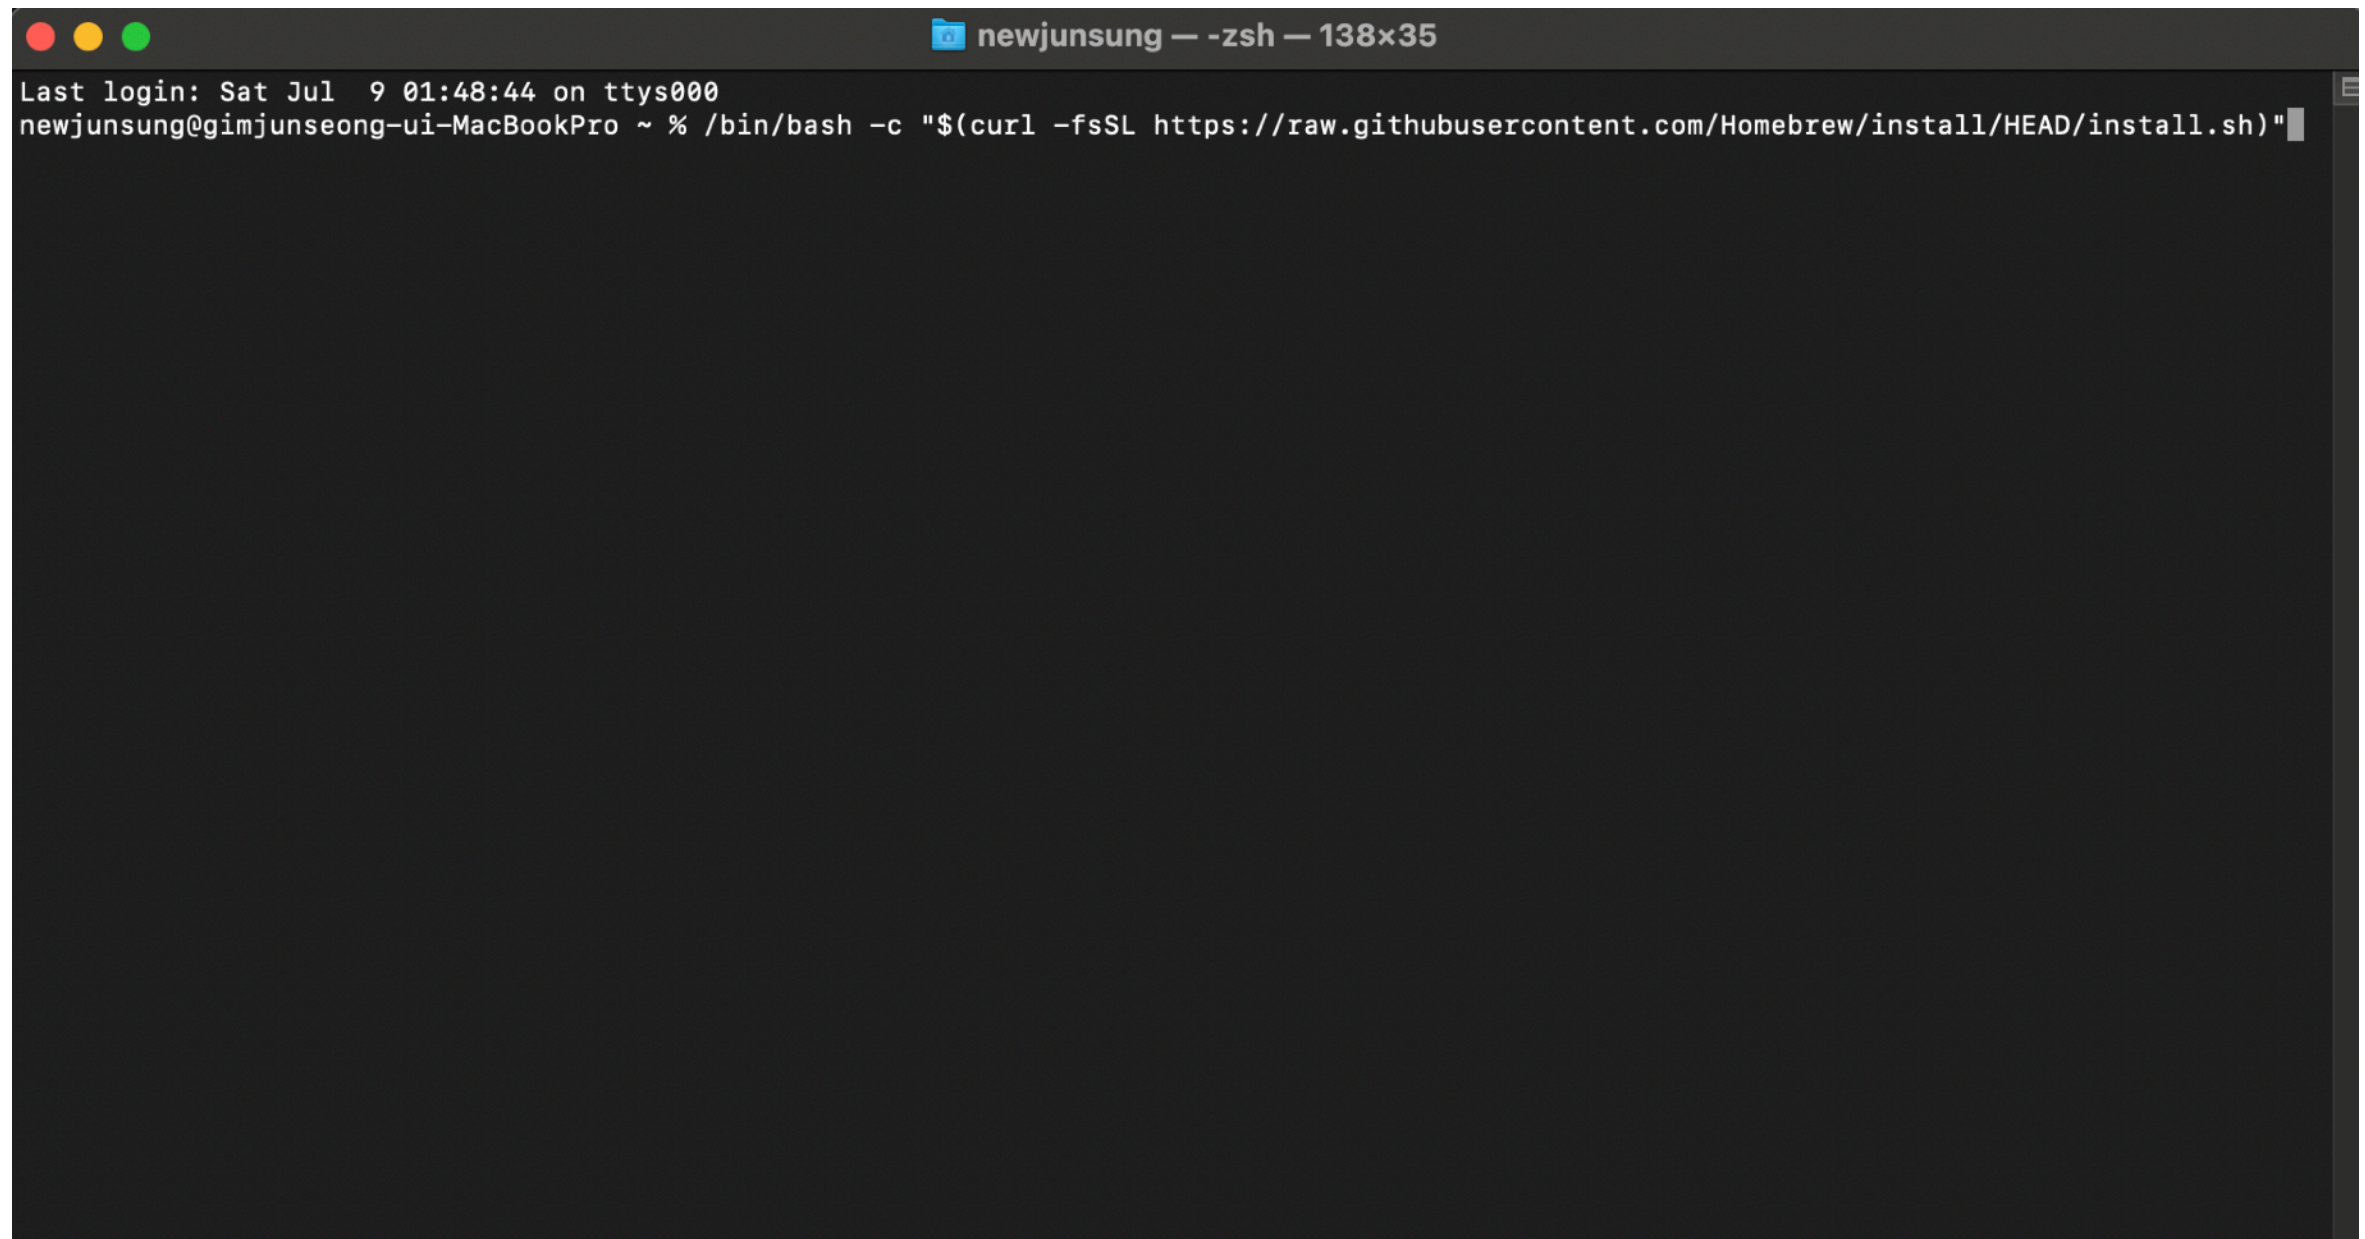

Homebrew 설치하기의 복사 버튼 클릭!

Git 설치

터미널을 실행!

⌘(command) + V로 붙여넣기!!

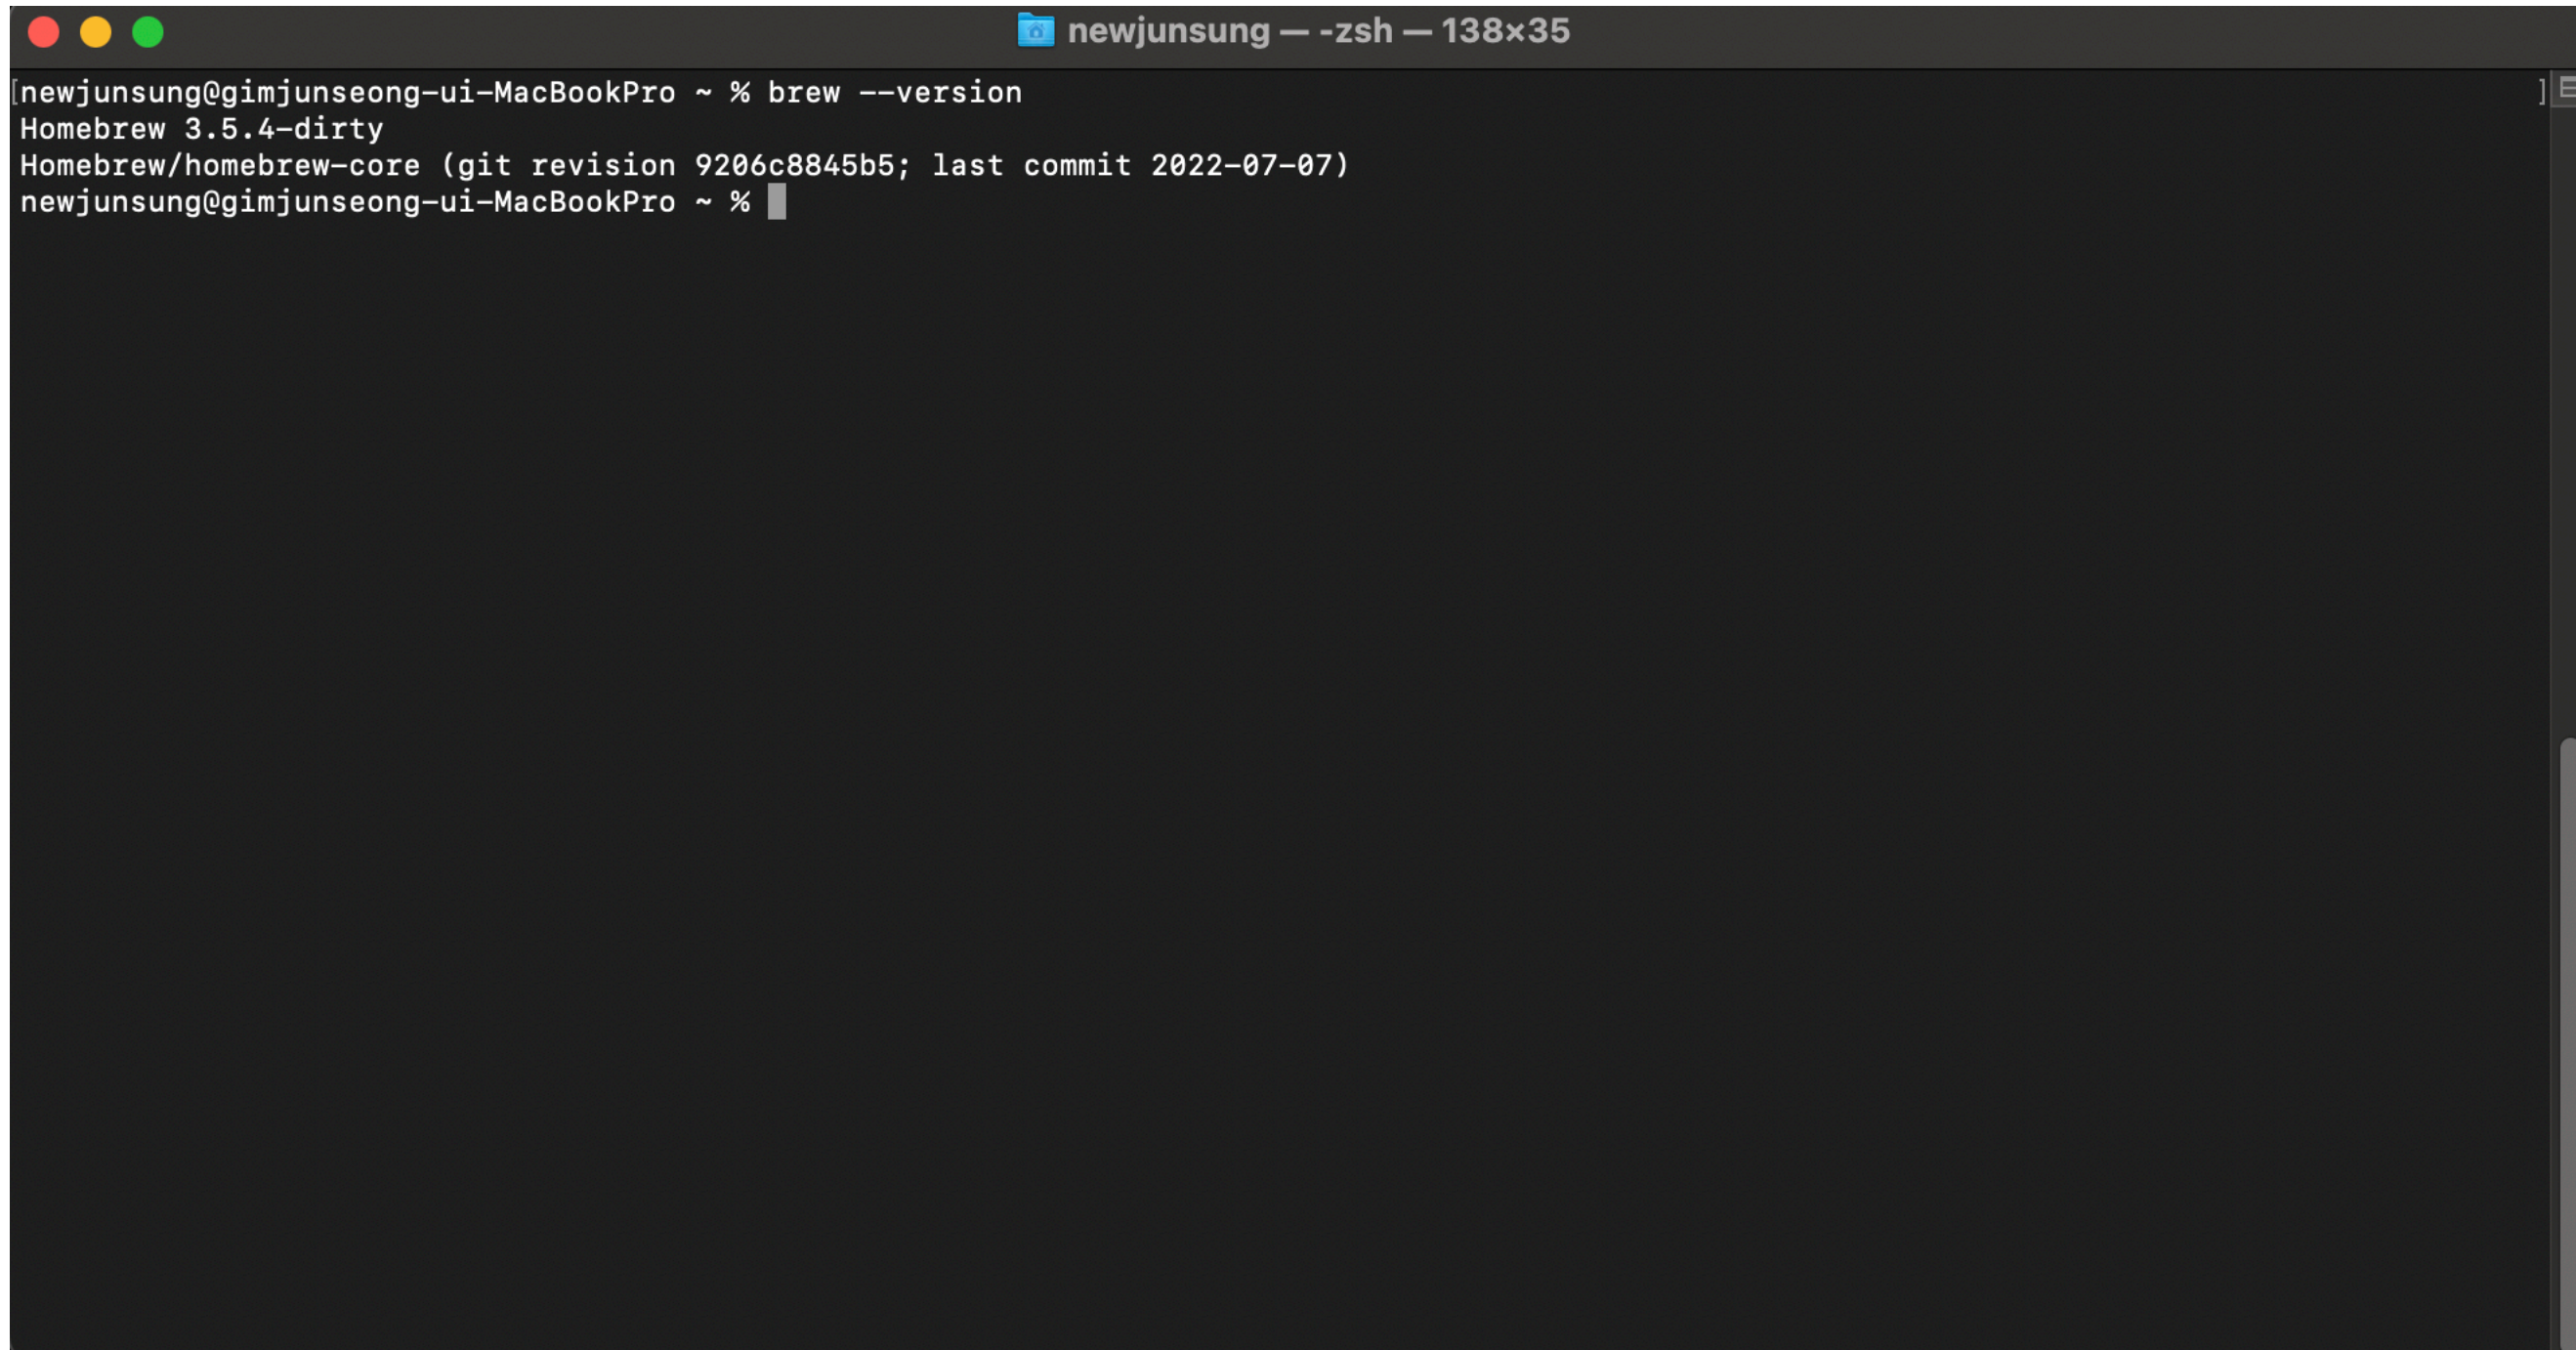

```
newjunsung — -zsh — 138x35
Last login: Sat Jul  9 01:48:44 on ttys000
newjunsung@gimjunseong-ui-MacBookPro ~ % /bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Git 설치

brew --version으로 Homebrew가 제대로 설치되었는지 확인!

만약 zsh: command not found: brew가 뜬다면?!

A screenshot of a macOS terminal window. The title bar at the top shows three colored window control buttons (red, yellow, green) on the left, and the text 'newjunsung — -zsh — 138x35' on the right. The terminal content shows a user prompt '[newjunsung@gimjunseong-ui-MacBookPro ~ %]' followed by the command 'brew --version'. The output is 'Homebrew 3.5.4-dirty' followed by 'Homebrew/homebrew-core (git revision 9206c8845b5; last commit 2022-07-07)'. The prompt returns to '[newjunsung@gimjunseong-ui-MacBookPro ~ %]' with a cursor. A vertical scrollbar is visible on the right side of the terminal window.

```
[newjunsung@gimjunseong-ui-MacBookPro ~ % brew --version
Homebrew 3.5.4-dirty
Homebrew/homebrew-core (git revision 9206c8845b5; last commit 2022-07-07)
newjunsung@gimjunseong-ui-MacBookPro ~ %
```

Git 설치

{`"export PATH=/opt/homebrew/bin:$PATH"` >> `~/.zshrc`} 를 입력해줍니다! (중괄호는 빼고 쳐야합니다!)

만약 그럼에도 불구하고 안된다면?(순서대로 복붙해봅시다 ㅠㅠ)

```
cd /opt
```

```
sudo mkdir homebrew
```

```
sudo chown -R $(whoami) /opt/homebrew
```

```
curl -L https://github.com/Homebrew/brew/tarball/master | tar  
xz --strip 1 -C homebrew
```

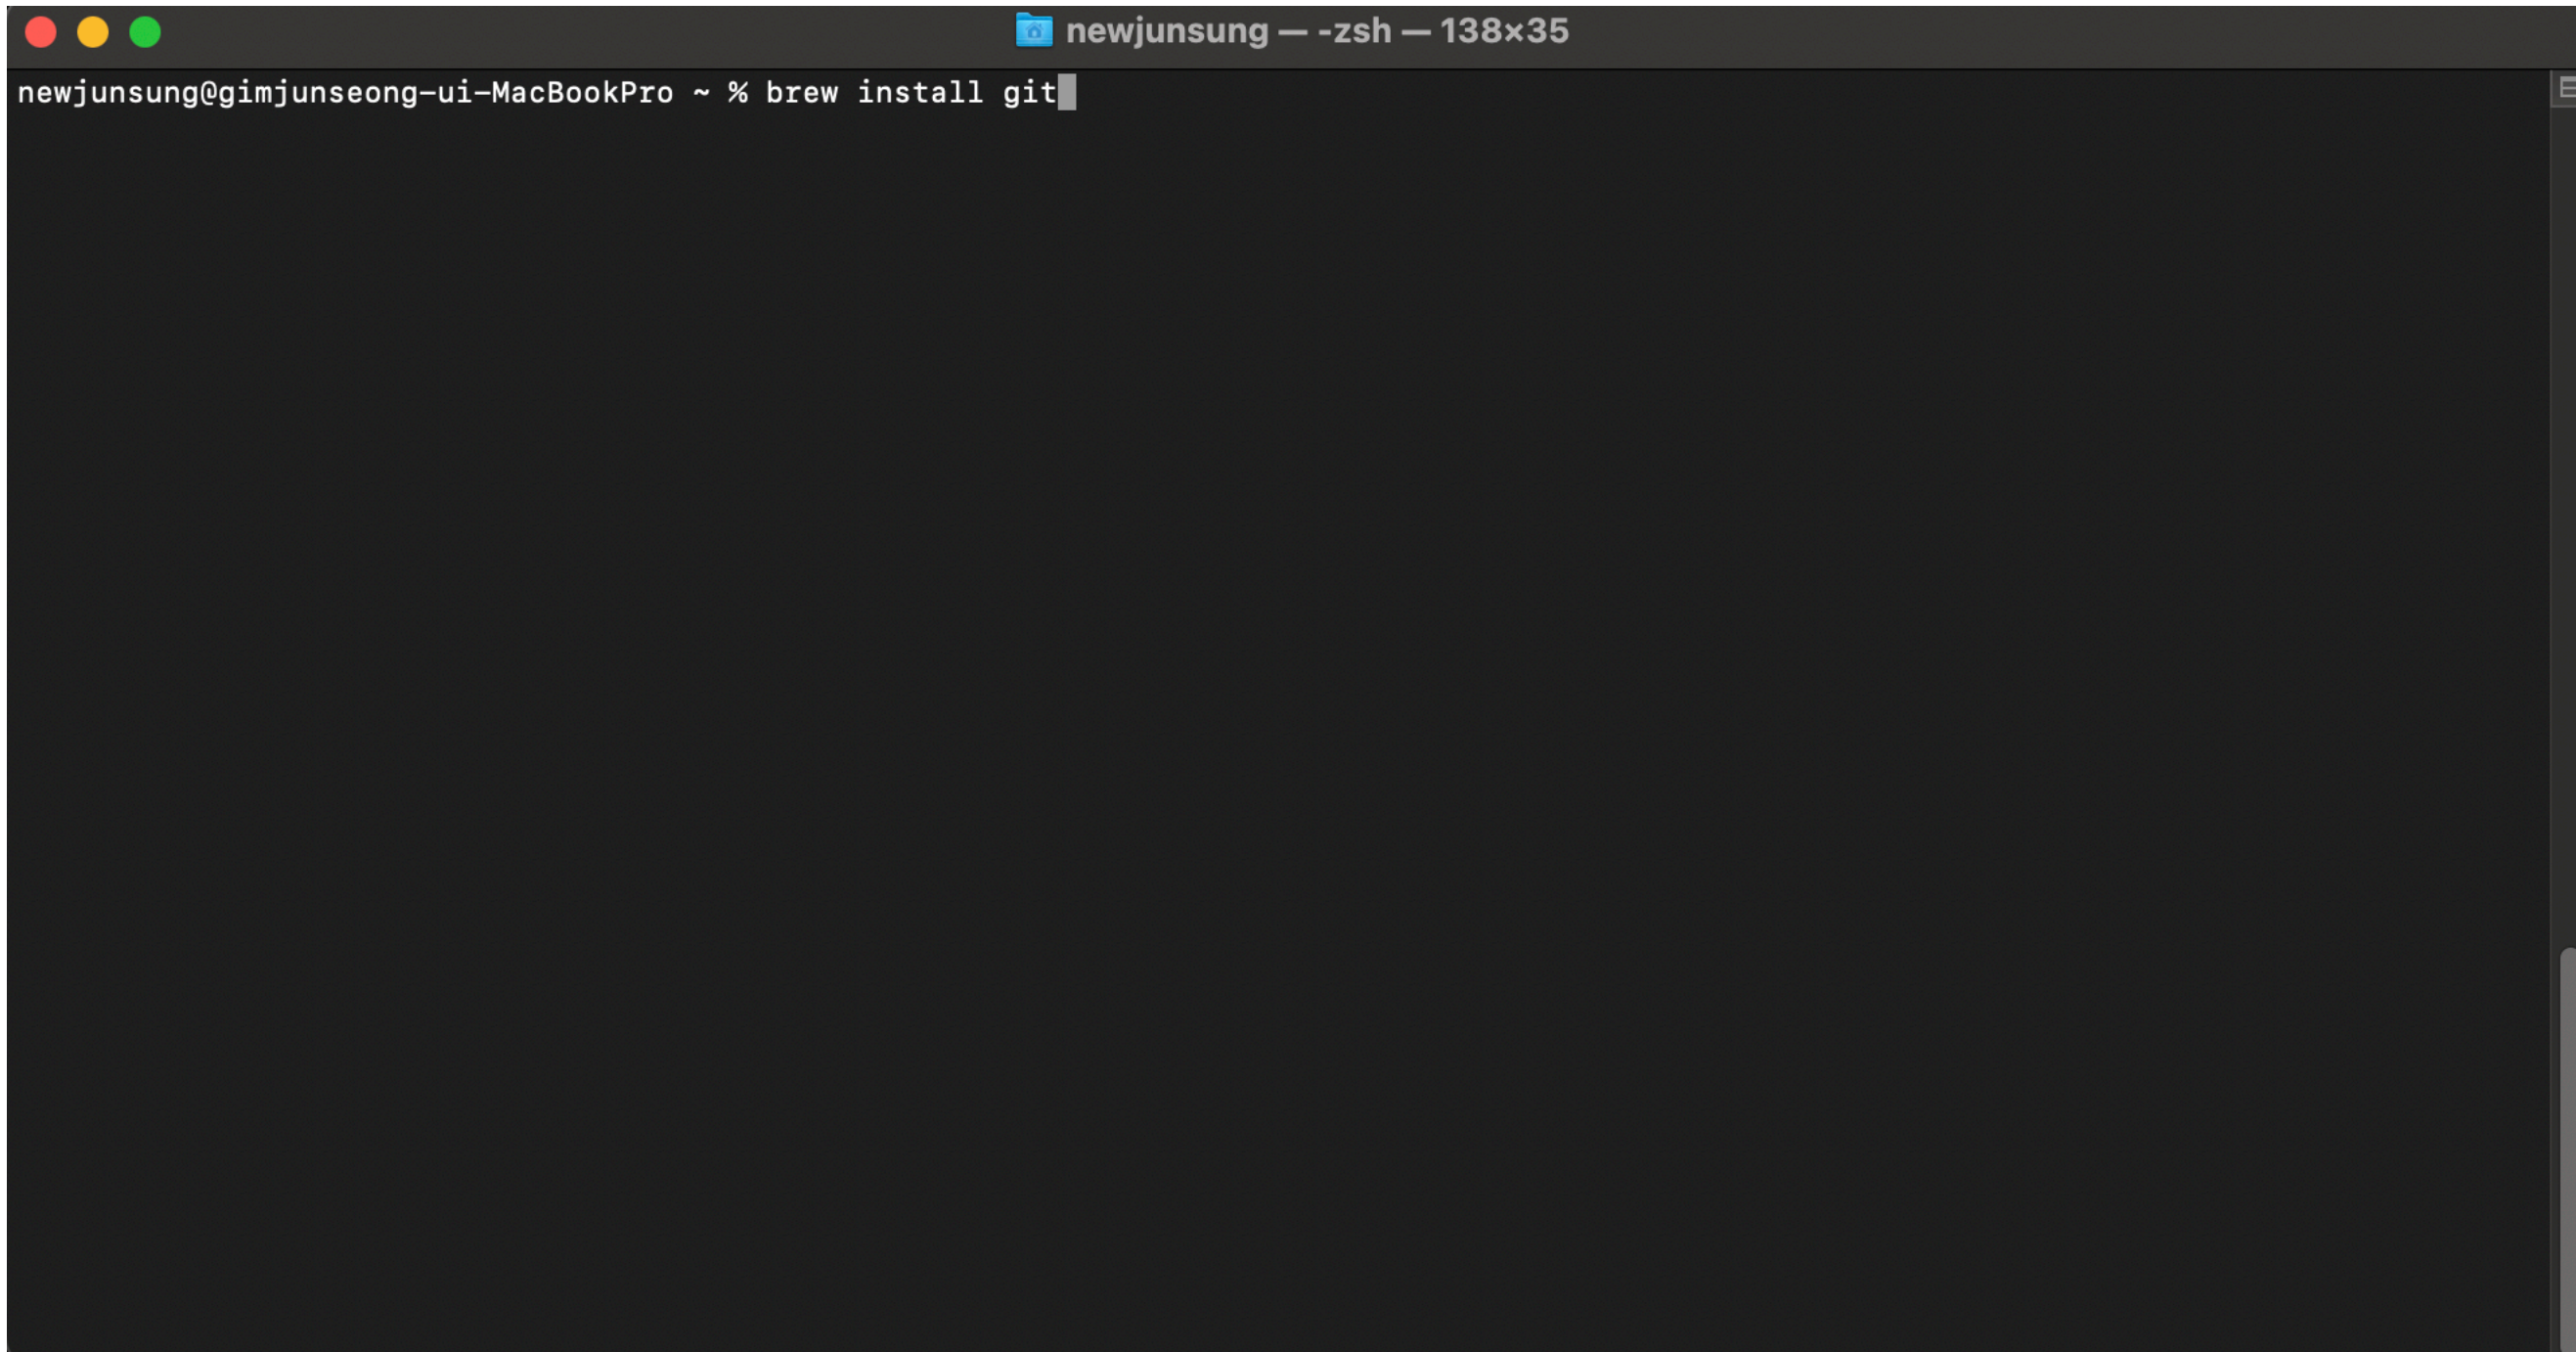

```
echo "export PATH=/opt/homebrew/bin:$PATH" >> ~/.zshrc
```

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/  
Homebrew/install/HEAD/install.sh)" <- 이거는 슬라이드 3처럼 하면 됨!
```

Git 설치

brew install git을 해서 이제 진짜로 git을 설치합니다!

설치가 되었다면, git --version으로 설치가 되었는지 확인합니다!

A screenshot of a macOS terminal window. The title bar at the top shows three colored window control buttons (red, yellow, green) on the left, and a folder icon followed by the text 'newjunsung — -zsh — 138x35' on the right. The terminal content shows the prompt 'newjunsung@gimjunseong-ui-MacBookPro ~ %' followed by the command 'brew install git' which has been entered and is followed by a cursor. The rest of the terminal area is empty and dark gray.

```
newjunsung@gimjunseong-ui-MacBookPro ~ % brew install git
```

Git 설치

마지막으로 깃의 기본 브랜치 이름을 main으로 설정하기 위해

git config --global init.defaultBranch main을 입력하면 됩니다!
